

Data Quality Statement

This data quality statement was undertaken using a standardized tool and the automated production of this data quality statement is pending. For more information regarding the assessment process, please contact

decision.support@gbrrmpa.gov.au.

Asset information	
Asset name	Social and Economic Long Term Monitoring Program (SELTMP) for the Great Barrier Reef data, 2025
Link to item	
Description	SELTMP is assisting Reef managers and other decision-makers within the Great Barrier Reef region to incorporate the human dimension into their planning and management. Analogous to the Australian Census, SELTMP gathers long-term data specific to Reef users, communities and industries, enabling new insights into relationships, vulnerabilities and dependencies between people and the natural resources.

Data quality ratings			
Institutional environment	4/5	Low risk	
Accuracy	4/4	Low risk	
Coherence	5/5	Low risk	
Interpretability	5/5	Low risk	
Accessibility	5/5	Low risk	
Score	4.75 / 5.0		
Risk rating	Low risk		
Confidence score	100%		
Risk summary			
This data set is rated as Low risk in all dimensions, suggesting there are few risks associated with this dataset. You may reference the Reef Authority’s Risk Management SharePoint and consider completing a Data Suitability Assessment.			

Assessment			
Institutional Environment	True/False	Uncertain?	Comments or context
1. The agency publishing this data is the recognized data custodian.	True		Accompanying details provided on CSIRO Data Access Portal (DAP)
2. Data is collected and managed according to a data quality framework.	True		See online CSIRO Research Development Plan (RDP)
3. Data governance roles and responsibilities are clearly assigned for this dataset or data source.	True		See online CSIRO RDP
4. Data collection is mandated or required by law, regulation or agreement.	False		Not mandatory, but collect bi-annually depending on funding agreements
5. The data custodian has no commercial interest or conflict of interest in the data – or has declared any interest in the data	True		SELTMP datasets are a public asset for Australia, funded by the Australian Government
Accuracy	True/False	Uncertain?	Comments or context

1. There are no known gaps, adjustments, changes, or other factors that could impact the validity of the data.	True		The sampling method changed in 2021 from in-person to online surveys. Frequency of sampling also changed from 4 year intervals (2013, 2017) to 2-year intervals (2021, 2023, 2025, etc.)
2. A systematic method of data collection was employed.	True		As per above (change in sampling method). These changes are recorded in technical reports that accompany the datasets, from 2021 onwards.
3. The data has been subjected to quality assurance processes.	True		Yes – documented in methods section of accompanying tech reports + in the dataset metadata (since 2021).
4. Data collection was undertaken by a trained professional.	True		Online survey provider was ORU – but survey respondents are residents of GBR region catchments.
Coherence	True/False	Uncertain?	Comments or context
1. Standard definitions, common concepts, classifications and data recording practices have been used.	True		Naming conventions for files have been implemented, a register of datasets is available and definitions have been recorded for survey variables as well as data dictionary. Standard definitions are also reported in Methods. Common concepts such as likert scales used, age range groups, gender categories. Data stored and managed according to RDP. SELTMP currently uses consistent survey formats and standard response categories, with ongoing refinement of definitions and recording procedures to improve data

			quality and comparability.
2. Elements within the data can be meaningfully compared.	True		Subjective depending on sample and Q's – but generally true. Metadata sheets provide information to enable comparisons to be made efficiently and accurately.
3. This data is generally consistent with similar or related data sources.	True		Standardized against national and international social monitoring surveys
4. There have not been any significant changes in the way data items are defined, classified or counted.	True		Some minor changes in rating scales across data sets (e.g., 5-point to 7-point).
5. The generation method can be consistently reproduced under the same conditions if required.	True		The methods of generating the data have been documented to facilitate reproduction.
Interpretability	True/False	Uncertain?	Comments or context
1. A data dictionary is available to explain the meaning of data elements, their origin, format and relationships.	True		Data dictionary available
2. Information is available about the primary data sources and methods of data collection.	True		Documented in methods section of accompanying technical report(s)
3. Information is available to help users evaluate the accuracy of the data and any level of error.	True		
4. Information is available to help users correctly interpret the data and understand how it can be used.	True		Tech report + dashboard
5. Information is available to explain ambiguous or technical terms used in the data.	True		Metadata + tech report + pop-ups in dashboard when you hover over data
Accessibility	True/False	Uncertain?	Comments or context
1. The asset is available online with an open license or is readily available upon request.	True		Available via Dashboard and DAP. Consent (to full open access of data) has been obtained from the participants who provided the data.
2. This asset is described using open standards and persistent identifiers.	True		DOI assigned to DAP records
3. The asset is linked to other data, to provide context.	True		Via SELTMP website
4. This asset is available in a machine-processable, structured format.	True		Data made available on DAP in excel format

5. This asset is available in a non-proprietary format.	True		Can be downloaded as csv
